ABSTRACT

Alrabbi, (2018) :The Impact of Early Age Marriage Towards Family Care in
Kampar Kiri District Kampar Regency

Marriage for human being is important, because with a marriage a person will get the balance of life both biologically, psychologically and socially. Early marriage age can increase the case of divorce due to lack of awareness to be responsible in married life for husband and wife. Once they decide to get married, they are ready to bear all the burdens arising from the marriage, whether it concerns the provision of livelihoods, the education of children, or those related to protection, education and good association. Research on the impact of early marriage on the pattern of family care and factors that encourage early marriage in Kampar Kiri district Kampar regency. The method used is descriptive quantitative. To know the result of research the writer used technique of questionnaire and observation. The technique of sampling using random sampling technique. The data obtained from the questionnaire then in the analysis using the Slovin formula that is from the population amount with the level of laxity inaccuracy of 10%, by using random sampling technique where the community is taken at random. to test hypothesis in this research is by using simple linear regression with correlation value 0,644 (64,4%). With a significant level of $0.003 < 0.05$ and the results of hypothesis testing with $t_{count} > t_{table}$ or $(3.423 \geq 1.803)$ then H_0 is rejected and H_a received. It means there is a significant impact between early marriage to pattern of family care . While the percentage contribution of early marriage impact to the pattern of family care in Kampar Kiri District Kampar Regency is 52.3% while the rest equal to 47.7% influenced by other factors.

Keywords: *Early Age Marriage, Family Care Pattern*
