## **ABSTRAK**

Desfindah Ranita, R (2020): Hubungan antara Prokrastinasi Akademik iik U Pada Siswa dan Hasil Belajar Bahasa Inggris di Sekolah Menengah Pertama 40 Pekanbaru

Penelitian ini membahas tentang hubungan antara prokrastinasi akademik dan hasil belajar bahasa Inggris di kelas satu Sekolah Menengah Pertama 40 Pekanbaru. Ada tiga rumusan masalah, yaitu: (1) Bagaimana kebiasaan menunda pada siswa Sekolah Menengah Pertama 40 Pekanbaru. (2) Bagaimana hasil belajar siswa Sekolah Menengah Pertama 40 Pekanbaru. (3) Adakah hubungan yang signifikan antara kebiasaan menunda dan hasil belajar pada siswa Sekolah Menengah Pertama 40 Pekanbaru. Penelitian ini merupakan penelitian korelasional. Kuesioner dan tes diberikan dan didistribusikan kepada 40 siswa untuk menjadi responden. Penulis menganalisa data dengan menggunakan Pearson "r" Korelasi Product Moment menggunakan program SPSS 23 untuk mencari tahu apakah ada hubungan antara kebiasaan menunda pada siswa Sekolah Menengah Pertama 40 Pekanbaru. Hasil penelitian menunjukkan p adalah 0,000, nilai 2-tailed lebih kecil dari 0,05 (p<0,05). Selain itu, penulis menemukan bahwa ilai koefisien korelasi (r) adalah -669. Itu berarti hipotesis Ha diterima dan Ho ditolak. Jadi, dapat disimpulkan bahwa ada hubungan negatif yang signifikan antara kebiasaan menunda siswa dan hasil belajar di Sekolah Menengah Pertama 40 Pekanbaru.

**ABSTRACT** 

Desfindah Ranita R, (2020): The Correlation between Students' Academic Procrastination and Their English Learning Procrastination and Their English Learning Achievement at Junior High School Pekanbaru

This research discussed about the students' academic procrastination and otheir English learning achievement at Junior High Shcool 40 Pekanbaru. There owere 3 formulatios of the problems, they were: (1) How is the students' academic oprocrastination at Junior High School 40 Pekanbaru. (2) How is the students' English learning achievement at Junior High School 40 Pekanbaru. (3) Is there any significant correlation between students' academic procrastination and their English learning achievement at Junior High School 40 Pekanbaru. This research was correlational research. The questionnaire and test were administered and distributed to the 40 students to be the respondents. The writer analyzed the data by using Pearson "r" Product Moment Correlation using SPSS 23 program in order to find out whether or not there was any significant correlation of students' academic procrastination and their English learning achievement at the first grade students of Junior High School 40 Pekanbaru. The result showed p was 0.000, the 2-tailed value was smaller than 0.05 (p<0.05). Moreover, the writer found that the value of correlation coefficient (r) is -669. It means the hypotheses H<sub>a</sub> was accepted and H<sub>o</sub> was rejected. So, it can be concluded that there was significant negatif correlation between students' academic procrastination and their English Plearning achievement at Junior High School 40 Pekanbaru.

## **CHAPTER I**

## **INTRODUCTION**

## A.Background of the Problem

Teaching and learning process are the main aspects in education. This Casualy happens in classroom activities. Learning is the activity or process of Egaining knowledge or skill by studying, practicing, being taught, or experiencing Egain the knowledge by having experience in learning process. Pritchard (2009) stated that learning is the acquisition of knowledge. It means that the ability, skill and knowledge can be mastered when people also have experiences in learning process.

The process of learning cannot be separated from the word of achievement. Achievement is the attainment of knowledge, competencies, and higher-level status, as may be reflected in grades, degrees, and other forms of certification or public acknowledgment. The quality of good learning can be measured or can be seen from the students' mark after doing task and learning activity. The students' achievement will be high if the learning process is running well and vice versa. It can be concluded that achievement is the result of learning process reached by the students; it can be the scoring from teacher and mastering the skills in lessons. The learning process which occurs in the class has some agoals and one of them is to reach the students' achievement.

1

Hak Cipta Dilindungi Undang-Undang Dilarang mengutip sebagian atau seluruh karya tulis ini tanpa mencantumkan dan menyebutkan sumber:

N

Different subject has different achievement to be reached. In learning English, there are four skills that should be mastered, those are speaking, writing, reading and listening. In order to acquire knowledge and get maximum score in English achievement, students are required to master all of these language.

Regarding to the fact, there are many factors that influence students' learning

achievement. One of them is procrastination behavior.

Procrastination behaviour is now a common phenomenon among students. It affects them in many areas of life, including language learning. Procrastination refers to the act of putting off actions or tasks to a later time. Ferrari and Morales (2015) defined procrastination as an irrational tendency to delay beginning and/or completing tasks that should be completed, feeling subjective discomfort. Here are particular students who delay the task from the teacher when they feel unsure to be able to accomplish it. The reason is because of the quantity of the task and/or the difficulty of the task. In addition, some students postpone reading assignment and read it the night before class, or even couple minutes before class. Another reason is that students are lack of motivation to finish the assignment on procrastination.

In education and training, the term 'academic procrastination' is commonly used to denote the delay in academic activities. According to Senecal Karatas (2015) academic procrastination is a person delaying academic studies procrastination occurs when a person is passive in completing academically

Dilarang

Hak Cipta Dilindungi Undang-Undang

arelated tasks such as studying for an exam or talking to an instructor. People who procrastinate academically may be consciously or unconsciously aware they are engaging in the behaviour.

Procrastination has been found to start in secondary school and to be opersistent throughout university, with more than 50% of the students reporting a steady delay causing problems (Steel, 2007). In students' academic life, both operate and academic procrastination may affect their academic performance including learning achievement. Academic procrastination has been found to be associated with numerous negative academic outcomes like missing deadlines for submitting assignments, delaying studying for tests and examinations and obtaining low grades.

Junior High School 40 Pekanbaru is one of educational institutions in Pekanbaru. This school is located at Garuda Sakti street. As a formal education, English is also taught in this school. Junior High School 40 Pekanbaru uses School Base Curriculum (KTSP) in the process of teaching and learning English. Each student should get 75 score as the minimum competence criterion (KKM). In this school, English is taught twice a week in 90 minutes duration for one meeting. It means that they learn English for 180 minutes in a week.

Yet, in preliminary research at Junior High School 40 Pekanbaru on 25th July 2018, the writer found that some of the students still got difficulties in Elearning English which affected their English achievement. Some of students still tended to do the procrastination behaviour. It can be seen from their

Sultan Syarif Kasim Riau

Hak Cipta Dilindungi Undang-Undang

Dilarang

There were about 46 students who get the English score under the KKM. The writer also found that some of students chose to do their homework in the class trather than at home. There were some reasons why the students tend to do their homework at school. Firstly, the laziness; some of them were lazy to do their homework. They tended to do another things that they thought it was fun rather than did the task .The other reason was the type of task given by the teacher (task aversiveness). Types of tasks that are difficult and boring make them reluctant to

This habit of course has a negative impact on student learning. A good learning achievement is the main goal for students in the learning process. The wrong way of students in learning like procrastinating behaviour is certainly one of the resistor of student success. Academic procrastination can be said as a problem that need attention. Cases of procrastination are widely reported in many schools including in schools where researchers will conduct the research.

do it. As a result the students wait until the task deadline and copied others' work.

Based on the writer's preliminary research at Junior High School 40 Pekanbaru, the phenomena can be seen as follows:

- Some of the students have lack of preparation for quiz and exam in learning English.
- 2. Some of the students get low score for English assignment and examination.
- 3. Some of the students tend to do their English homeworks at school.

State Islamic University of Sultan Syarif Kasim Riau

Hak Cipta Dilindungi Undang-Undang

Dilarang

4. Some of the students do not submit the English assignment on time.

Based on the phenomena above, the writer is interested in conducting a research entitled "The Correlation between Students' Academic Procrastination and their English Learning Achievement at Junior High School 40 Pekanbaru".

## B. The Problem

## 1. Identification of the Problem

Based on the background that the writer found from preliminary study above, the writer identified the problems of this research as follow:

- a. Why do some of the students lack of preparation for quiz and exam in learning English?
- b. Why do some of the students get low score for English assignment and examination?
- c. Why do some of the students tend to do their English homework at school?
- d. Why do some of the students not submit the English assignment on time?

## 2. Limitation of the Problems

Based on the identification of the problem above, the writer needs to limit the problems in order to pay more attention to the specific problem. This research focuses on the correlation between students' academic

State

Dilarang mengutip sebagian atau seluruh karya tulis ini tanpa mencantumkan dan menyebutkan sumber:

procrastination and their English learning achievement of the second year students at Junior High School 40 Pekanbaru.

## 3. Formulation of the Problem

The problem of this reasearch can be formulated in the following questions:

- a. How is the students' academic procrastination at Junior High School 40 Pekanbaru?
- b. How is the students' English learning achievement at Junior High School 40 Pekanbaru?
- c. Is there any significant correlation between students' academic procrastination and their English learning achievement at Junior High School 40 Pekanbaru?

- a. To find out the students' academic procrastination at Junior High
- b. To find out the students' English learning achievement at Junior High
- 1. The Objective of the Research

  a. To find out the students' academic procrass
  School 40 Pekanbaru.

  b. To find out the students' English learning ach
  School 40 Pekanbaru.

  c. To find out whether there is a significant correst

Riau

State Islamic University of Sultan Syarif Kasim Riau

## 2. The Significance of the Research

- a. To give information to the teachers, and the institutions about the correlation between students' academic procrastination and their English learning achievement.
- b. To increase the experience and knowledge of the writer in the problem being discussed.
- c. To fulfill one of the requirements for the graduate of S1 degree at English Education Department of State Islamic University of Sultan Syarif Kasim Riau.

## D. The Reason for Choosing the Title

The writer is interested in carrying out a research on the topic above is based on the several considerations, namely:

- 1. Academic procrastination is one of the most students problem at school and has an important influence in learning achievement, including English learning achievement.
- 2. The problems of this research are very interesting and challenging to be investigated because the other researchers have never studied this research.
- 3. The tittle of this research is relevant with the writer's status as student of English education.

## The Defenition of Term

For preventing misunderstanding and misinterpratation, some key terms in this research are defined as follows:

## 1. Correlation

According to Creswell (2012) correlation is a statistical test to determine the tendency or pattern for two (or more) variables or two sets of data to vary consistently. The term of correlation in this research is the correlation between students' academic procrastination and their learning English achievement at Junior High School 40 Pekanbaru.

## 2. Academic Procrastination

In education and training, the term 'academic procrastination' is commonly used to denote the delay in academic activities. According to Senecal as cited in Karatas (2015), academic procrastination defined as a person delaying academic studies until a moment when intensive stress is experienced. In this research the term procrastination refer to the trait or behavioural disposition to postpone a task or making decision.

## 3. Learning

State Islamic University of Sultan Syarif Kasim Riau

According to Brown (2007), learning is acquiring or getting of knowledge of a subject or a skill by study, experience, or instruction. It is the process of acquiring relatively permanent change in understanding, attitude, knowledge, information, ability, and skill through experience. In

this case, learning is the process of getting experience and knowledge in some ways.

## 4. Achievement

Hornby (2010) defined achievement is an action of achieving something with efforth and skill. Thus, the study of this research refers to the students' achievement in learning English.

## **CHAPTER II**

## REVIEW OF RELATED LITERATURE

## **Theoritical Framework**

## **5** The Concept of Learning Achievement

Learning is an essential process that has purpose to make a change of behaviour, attitude,habitual,knowledge, and skill as a result of individual experience of interaction with the environment. Brown (2007) defined "learning is acquiring or getting of knowledge of a subject or a skill by study, experience, or instruction". In line with Brown, Richards and Schmidt (2010) defined learning as the process by which change in behaviour, knowledge, and skills comes about through practice, instruction or experience and the result of such a process. Pritchad (2009) stated that learning is the process of gaining more knowledge, or of learning Now to do something.

lamic It means that learning is the individual process of constructing and understanding knowledge based on experience from studying something. Learning 18 not only about gaining the knowladge and skill, it also the changing of mental aspects of human beings. In accordance with the idea, Taylor (2008) defined learning as "acquiring not only the subject matter but also acquiring habits, attitudes, perceptions, preferences, interests, and social skills of many types.

From the definition above, learning has three important emlemen:

a. Learning is a process of gaining knowledge and skill through practice or experience with the environment.

## © Hak cipta mili&U

Hak Cipta Dilindungi Undang-Undang

Dilarang

- b. Learning is a change of behavior
- c. Acquring not only knowledge, but also many social skills.

The ultimate goal of learning process is to reach the achievement. It can be the score, skill, knowledge, etc. According to Hornby (2010), achievement is something done successfully with an efforth and skill. It means that the students' effort and skill can determine their success. Then, based on the Greenwood effectionarry of education (2007), achievement is the attainment of knowledge, competencies and higher level status, as may be reflected in grades, degrees and other forms of certification or public acknowledgement. It means that the learning outcomes is measured by the knowledge and skills that the learnenr has.

Learning achievement simply means gaining knowledge. It is a successfull performance on specific task or accomplisment in particular subjects, areas, or courses, usually by reason of skill, hard work and interest. Achievement which is reflected in form of mark or grade will be obtained after doing task or another test various types of grades, marks, scores designed by the teacher. Based on some definition above, we can conclude that learning achievement or learning result is change that is happened in students self after follow a learning process. The change that is a response that given by students. Learning result that is found is the only knowledge but also students' behavior.

## 2 English Learning Achievement

a. The Factors Influence Students' English Achievement

A good learning achievement is not easy to gain because learning achievement can be influenced by many factors. Slamet (2013) divided the factors into two factors, they are external and internal factors. Internal factors include physiological, psychological and fatigue, while external factors include family, school and environtment.

## 1) Internal Factors

## a) Physiological

In these physical factors can be divided into two factors namely health and disability factors. Health factors are very influential on student learning, if students experience the disease, such as headache, influenza, fever and so forth can make them not interested in learning. In the other hand, disability also affect the students in learning. These defect in the form of blind, partially blind, broken leg, broken arm, paralyzed, and others.

## b) Psychological

Psychology will basically affect learning achievement. This can be seen from the results and behavior of students. There are seven factors belonging to psychological factors that influence learning. These factors are intelligence, attention, interest, talent, motives, maturity and readiness. If students fulfill factors positively, the process of teaching and learning will be more effective. Students will be ready to face all

problems, especially those which is related to the teaching and learning process. c) Fatigue factor

Physical and mental fatigue can affect learning and achievement. Physical fatigue such as the body that feels so weak and arises a tendency to lay down. Mental fatigue can be seen in lethargy and boredom, so that interest and encouragement to produce something seen to be lost.

## 2) External factors

## a) Family factors

Family factors are very active role for students. The family situation can influence the students' success in learning. The way parents educate, the relationships between family members, the family circumstances, the understanding parents, the family economic circumstances, the cultural background and also the homelike is very influence the learning achievement.

## b) School

There are a lot of school factors that can influence students' learning achievement like teaching method, curriculum, learning tools, school time, the interaction of teachers and pupils, media, school dsicipline, building and also learning model.

## Hak cipta milik UIN S

State Islamic University of Sultan Syarif Kasim Riau

Hak Cipta Dilindungi Undang-Undang Dilarang mengutip sebagian atau seluruh karya tulis ini tanpa mencantumkan dan menyebutkan sumber: Ria

3) Society of Environmental Factors

Community factors also affect student learning. That influence occurs because of the existence of students in the community itself. Such as student activities in society, mass media, associating friends and also life forms of society also influence student learning and achievement.

## The Concept of Academic Proscratination

a. Definition of Academic Procrastination

word procrastination originates from Latin "procrastinatus," which is divided into two parts. The first part "pro" means "forward" and the second part "crastinatus" means "of tomorrow" (Klein, as cited in Ghufron& Risnawita 2012). Thus, procrastination translates to delaying something until tomorrow. In the end, the delay or avoidance of the task which is then called procrastination is not always interpreted equally in the perspective of human culture and language. The ancient Egyptiants, for example, possessed two verbs that have been translated as meaning procrastinate. Inedenoted the useful habit of avoiding unnecessary work and implusive effort, while the other denotated the harmful habits of laziness in completing a task necessary for subsistence, such as tilling the fields at the appropriate time of year in the Nile flood cycle (Ferrari in Ghufron & Risnawita 2012). So in the last century procrastination was positively meaningful if the delay was a constructive attempt to avoid impulsive and mature decisions, and to be negative if done lazily or without a definite purpose.

Hak Cipta Dilindungi Undang-Undang Dilarang mengutip sebagian atau seluruh karya tulis ini tanpa mencantumkan dan menyebutkan sumber.

I

Ferrari and Morales (2015) defined procrastination as an irrational dendercy to delay beginning and/or completing tasks that should be completed, seeling subjective discomfort. In line with that In line with that, Ackerman and Gross (2005) defined procrastination as the delay of task or assignment that is funder one's control. According to Steel (2007) procrastination, consists of the fine fine of an intended course of action, in spite of an awareness of fine gative outcomes. In addition, the Oxford English Dictionary defines are procrastination as "The action of delaying or postponing something".

In education and training, the term 'academic procrastination' is commonly used to denote the delay in academic activities. Rothblum, Solomon, and Murakami as cited in Ahmed (2017) defined academic procrastination as the "tendency to (a) always or nearly always put off academic tasks, and (b) always or nearly always experience problematic anxiety associated with this procrastination." According to Senecal, in Karatas (2015), academic procrastinationis defined as a person delaying academic studies until a moment when intensive stress is experienced. In the students' academic life, both general and academic procrastination may affect their academic performance including learning achievement.

A person who has a tendency to delay starting a work, when faced with a pob or a task is called someone who is doing procrastination. It does not matter whether the delay has an excuse or not. Any delay in dealing with a task is called procrastination.

Hak Cipta Dilindungi Undang-Undang

Dilarang

Ferrari et al. (1995) concluded that the notion of procrastination can be viewed from a number of specific limitations, there are:

- Any sample of dilatory behavior called procrastination, means that
  procrastination is only a behavioral delay, ie that every act of delay in
  doing a task is called procrastination, without questioning the purpose
  and reason for the delay,
- 2) The term can be reserved for the habit of postponing things and imply a personality trait. Procrastination as a habit or behavior pattern possessed by the individual, leading to trait, the delay is a constant response always undertakes in the face of a task, usually accompanied by irrational beliefs
- 3) The term of procrastination can also used for any single manifestation of the personality trait, it means that procrastination as a personality trait, in this sense procrastination is not just a delayed behavior, but procrastination is a trait that involves the components of behavior and other interrelated mental structures that can be known directly or indirectly.

Ferrari et al. (1995) divides procrastination into two:

a) Functional procrastination, is a strategy that procrastinator use in order to regulate negative emotions. It is occasional as it is associated to unexpected events.

Hak Cipta Dilindungi Undang-Undang

Dilarang

Hak cipta milik

b) Disfunctional procrastination refers to a chronic and irrational tendency to delay relevant activities in favor of less pressing ones.

Thus, from the various opinions of the experts above, it can be concluded that definition of procrastination can be defined as a delay that is carried out intentionally and repeatedly, by carrying out other activities that are not needed in the execution of tasks. Procrastination can be divided into two types based on the purpose and benefit of delay, namely dysfunctional procrastination, which is a nonpurposeful and detrimental delay and the functional procrastination, which is a delay accompanied by strong reasons, has a definite purpose so as not to harm, even useful to make an effort constructive so that a task can be completed properly.

In the end, in this study, the notion of procrastination is limited as a delay that is done intentionally and repeatedly, by carrying out other activities that are not needed in the execution of tasks, with the type of dysfunctional procrastination, namely the delay that is done on an important task, the delay is not intended, and can cause negative consequences both in the category of decisional procrastination or avoidance procrastination.

b. The Characteristic of Academic Procrastination

Ferrari et al. (1995) said that as a delaying behavior, academic procrastination can be manifested in certain indicators that can be measured and observed certain characteristics in the form of:

Postponing the moment one is intending to begin studying

Hak Cipta Dilindungi Undang-Undang ıska

Ha 3 

N

tate

nisim

Someone who does procrastination knows that the task he is facing must be completed immediately and is useful for him, but he procrastinates to start working on it or procrastinating to finish the task completely if he has started working before.

2) Postponing the moment that actual studying is to begin

People who do procrastination require a longer time than the time needed in general to do a task. A procratinator spends his time to prepare himself excessively, as well as doing things that are not needed in the completion of a task, without taking into account the limited time he has. Inaction, in the sense of the slow pace of one's work in carrying out a task can be a major feature in academic procrastination.

3) Study intention-behavior discrepancy

A procrastinator has difficulty doing something according to a predetermined time limit. A procrastinator often experiences delays in meeting predetermined deadlines, both by others and the plans he has set himself. Someone may have planned to start working on the task at his own time. Someone may have planned to start working on the task at his own time, but when the time came he did not do it according to what was planned, causing delays and failure to complete the task adequately.

Doing things other than studying

A procrastinator intentionally does not immediately carry out his duties, but uses the time he has to do other activities that are considered more enjoyable and

## = K

yarif Kasim

Riau

Hak Cipta Dilindungi Undang-Undang

bring entertainment, such as reading (newspapers, magazines, or other story books), watching, chatting, walking, listening to music, and so on, so that it takes up the time he has to do the tasks that must be completed.

So it can be concluded that the characteristics of academic procrastination on are delays to start and finish work on the tasks at hand, delays in working on tasks, time gaps between plans and actual performance and other activities that are more fun than doing tasks that must be done.

## c. Task Type of Academic Procrastination

Academic and non-academic procrastination is often the term used by experts to share types of tasks. Academic procrastination is a type of delay that is carried out on formal types of assignments that relate to academic assignments, such as school assignments or coursework. Another important aspect of academic procrastination is whether students may tend to procrastinate more frequently on certain types of tasks. Research clearly indicates that academic procrastination is task-dependent and that people exhibit procrastination in a variety of behaviors and settings. A study by Özer (2011) found that out of 149 students, 47% of high school students in Turkey reported that they procrastinated when studying for exams, 40% procrastinated when completing reading assignments, and 27% procrastinated when writing term papers. this finding determines that students tend to postpone on certain types of tasks.

Ha

3

Solomon and Rothblum in Ghufron & Risnawita (2012) assessing the frequency and reasons for procrastination in six academic areas such as writing a term paper, studying for an exam, keeping up with weekly reading assignments, performing administrative tasks, attending meetings, and performing academic tasks in general. Writing tasks include delays in carrying out obligations or writing assignments, such as writing papers, reports, or other composing tasks. studying for exams such as delaying learning to face exams such as midterms, final exam, or weekly tests. Reading assignments include delays in reading books or references relating to required academic tasks. Performance of administrative tasks, such as copying notes, registering in absent attendance, list of practicum participants and so on. Attend meetings, such as delays or late in attending lessons, practicums and other meetings. And sixth is a delay in overall academic performance, for example delaying work or completing academic tasks as a whole.

## 4. Academic Procrastination and English Learning Achievement

Academic procrastination can have a negative impact on students. This challenge is important to address because procrastination can develop into a habit that can seriously impact students ability to be productive. Dysfunctional procrastination or passive procrastination can plunge students into many problems. Students who have procrastinating habits will usually have problems with their learning achievements and others academic stuff.

An abundance of research has shown that the passive form of academic procrastination has significant adverse effects on academic progress, such as late

# Hak Cipta Dilindungi Undang-Undang Dilarang mengutip sebagian atau seluruh karya tulis ini tanpa mencantumkan dan menyebutkan sumber:

assignments, lower grades, and course withdrawals, Josep (2017). Consequently, academic procrastination adversely impacts students' personalities as well as their learning and achievement at almost all levels of studies and in all subjects.

Akinsola, Tella, and Tella (2007) found a significant negative correlation between academic procrastination and mathematics academic achievement.

Thus, the more the subjects procrastinated, the more their achievement in mathematics suffered. It is assumed that people who procrastinate academically will have lower grades and lower academic achievement.

Based on all the quotations above, it is very clear that academic procrastination can lead to lower academic achievement. Students who procrastinate will suffer at the end of their behaviour. Although procrastination may serve to relieve stress in the short term, but it can lead students to stress. procrastination will bring students to failure and even regret, but the nature of procrastination seems to have ingrained so that it is difficult to be stopped.

## B. Relevant Research

lamic Uni

There are some researchers that have been conducted and they are relevant to this research paper, such as:

Asri et al. (2017) in her research entitled "The Academic Procrastination in Junior High School Students' Mathematics Learning". To collect the data of the research, she used questionnaire, documentation, passive role observation and in-depth interviews. The research design was a qualitative descriptive. They

lamic University of Sultan

Hak Cipta Dilindungi Undang-Undang Dilarang mengutip sebagian atau seluruh karya tulis ini tanpa mencantumkan dan menyebutkan sumber.

cocluded that academic procrastination was caused by several factors. They were assumption that the tasks assigned are not important, too burdensome, and difficult to work, nsufficient knowledge, too perfectionist, bad management of learning, lack of self-regulation, stress and fatigue, lack of social support, indiscipline teachers, and inconducive school culture. They found that academic procrastination, most importantly, leads to low learning achievement.

Joubert (2015) conducted a correlational research at Schools in North West

province, South Africa. The dissertation entitled "The relationship between

procrastination and academic achievement of high school learners in North West province, South Africa". The researchers found a strong negative correlation (r = -.23; p < 0.01) showing that academic grades decrease when academic procrastination increases. This tends to confirm the view that procrastination might have serious consequences for academic performance. Bekleyen, (2017) in his research entitled "Understanding the Academic Procrastination Attitude of Language Learners in Turkish Universities. The main purpose of the study was to investigate the relationship between the procrastination levels of English language students and variables like gender, department, age, self-reported motivational levels, and satisfaction with majors. The findings of the study suggested that men reported significantly higher procrastination behavior. The participants who reported higher motivation procrastinated less while age was not found to be related to procrastination.

Syarif Kasim Three researches above are different with this research. The first research design is a qualitative descriptive research. Meanwhile, this research belongs to correlational research. The second relevant research is to find out whether there is a

mengutip sebagian atau seluruh karya tulis ini tanpa mencantumkan dan menyebutkan sumber:

Dilarang

Hak Cipta Dilindungi Undang-Undang

significant relationship exists between academic procrastination and academic chievement. It also investigated the correlations between gender and academic procrastination, age and academic procrastination, number of siblings and academic procrastination; and area of residence and academic procrastination. While, this research only focus on the correlation between academic procrastination and carring schievement. The third relavant research is to find out whether there is a significant relationship between the procrastination levels of English language students and variables like gender, department, age, self-reported motivational levels, and satisfaction with majors. While, this research focuses on the correlation between academic procrastination and learning achievement.

# C. Operational Concept

Operational concept is a concept as a guidance used to avoid misunderstanding. In planning the research, the operational concept can be formulated into particular words to get easy in measuring the research operation. The research consist of two variables, they are variable X and Y. Academic procrastination is as the independent variable (variable X) and achievement in learning English is as the dependent variable (variable Y).

# . Variable X: Academic Procrastination

In this study used the scale of academic procrastination which refers to the theory of Ferrari in Gufron (2012). This scale measures the level of student academic procrastination. This scale uses the characteristics of academic procrastination as an indicator to be measured.

# Hak cipta milik UIN Suska

Riau

Hak Cipta Dilindungi Undang-Undang

D. Assumption and the Hypothesis of the Research

1. Assumption

Based on the theories and explanations above, the writer assumes that higher the students' academic procrastination, the lower their English the learning achievement will be. In opposite, the lower the students' academic procrastinaton, the higher their learning English achievement will be.

2. Hypothesis

Based on the assumption above, hypothesis of this reasearch can be formulated as follows:

a. Null Hypothesis (Ho):

There is no significant correlation between students' academic procrastination and their leaarning English achievement at Junior High School 40 Pekanbaru.

b. Alternative Hypothesis (Ha):

significant correlation between students' academic procrastination and their leaarning English achievement at Junior High School 40 Pekanbaru.

# **CHAPTER III**

# RESEARCH METHOD

# **Research Design**

This research was a correlational research. According to Creswell (2012), "Correlation research is a statistical test to determine the tendency or pattern for two (or more) variables or two sets of data to vary consistently". It means that the writer used the correlation statistical test to describe and to measure the degree of association (or relationship) between two variables or sets of scores.

There were two variables in this research. There were variable X and variable Y. Variable X was academic variable and variable Y was stude dependent variable. The relationship variables in this study was a one-way following diagram pictures are the desemble of the Research Source: Creswell (2012.p 341).

Source: Creswell (2012.p 341).

The reserach was conducted at the second of the Research. variable Y. Variable X was academic procrastination level as an independent variable and variable Y was students' learning English achievement as dependent variable. The relationship between independent and dependent variables in this study was a one-way relationship, where X affects Y. The following diagram pictures are the design of this research:

Source: Creswell (2012.p 341)

The reserach was conducted at Junior High School 40 Pekanbaru. It is located on Garuda Sakti street. The researach was carried out in April 2019.

The subjects of this research were

The subjects of this research were the first year students of Junior High School 40 Pekanbaru. The objects of this reserach were the students' academic procrastination and their achievement in learning English.

D. Population and Sample of the Research

# 1. Population

According to Gay (2012), population is a general term for the larger group from which a sample is selected or the group to which the writer would like to generalize the results of the study. The population of this reserach were the first year students at Junior High School 40 Pekanbaru. There were 5 classes consisting of 200 students as the population. The specification of the sample of the research can be seen in the table below.

# 3. Validity

According to Creswell (2012), validity is the degree to which all of the evidence points to the intended interpretation of test scores for the proposed purpose. It means that validity is the extent to which inferences made from assessment results are appropriate, meaningful, and useful in terms of the purpose of the assessment. An instrument is valid if it is able to measure what must be measured. According to Gay (2000), there are three kinds of validity. They are content validity, criterion-related validity, and construct validity. In this research, the writer used content validity. Creswell (2012) described that content validity is the extent to which the questions on the instrument and the scores from these questions are representative of all the possible questions that could be asked about the content or skills. Azwar (2013) stated that Content validity is the extent to which test items can represent variables and behavioral characteristics to be measured.

Based on the try out result of the instrument validity to the 28 items, showed that all of the items were valid. It means that the instrument can be used in this research. The result of the instrument validity can be seen in the following table:

Table III.6

# The Analysis of Academic Procrastination's Questionnaire Validity

Item Number	r-item	r-table	Result

# 4. Reliability

Brown (2004) says that reliability has to do with accuracy of measurement. This kind of accuracy was reflected in obtaining of similar results when measurement was repeated on different occasion or with different instruments or by different person. The characteristic of reliability was sometimes termed consistency. To obtain the reliability of the test given, the writer used the SPSS 16.0 to find out whether the test is reliable or not. The following table is the level of internal consistency of Cronbach Alpha:

# Table III.7 The Alpha Coefficients

Cronbach Alpha	<b>Internal Consistency</b>
>0.90	Very Highly Reliable
0.80-0.90	Highly Reliable
0.70-0.79	Reliable
0.60-0.69	Marginally/Minimally Reliable
<0.60	Unacceptably Low
	Reliability

Based on the following above, it can be seen that the score of the items reliability is 0.884 is higher than r<sub>t</sub>. It can also be presented as 0.80 > 0.884 < 0.90 and the  $r_0$  of the items are reliable.

# **Cronbach Alpha Table**

**Reliability Statistics** 

Cronbach's Alpha	N of Items
.884	28

# F. Technique of Analyzing the Data

In order to find out whether there was a significant correlation between students' academic procrastination and their English Achievement, the data was analyzed by using statistical formula. The writer used the score of questionnaire of variable X and documentation score of variable Y. To analyze the data of the students' academic procrastination, the writer used formula from Sudijono (2007) as follow:

$$P = \frac{f}{N}x \ 100\%$$

Where:

State Islamic University of Sultan Syarif Kasim

P = Number of percentage

F = Frequency

= Number of Sample N

The data used in this research is an interval scale. To analyze the correlation between students' academic procrastination and their achievement in learning English, the writer used Pearson product-moment correlation coefficient by

cipta milik UIN

Riau

State Islamic University of Sultan Syarif Kasim Riau

Hak Cipta Dilindungi Undang-Undang Dilarang mengutip sebagian atau seluruh karya tulis ini tanpa mencantumkan dan menyebutkan sumber:

using SPSS 23 program for Windows. The product moment correlation coefficient was obtained by considering the degree of freedom (df) = N-nr; (N= number of sample, nr = number of variable)

Statistically the Hyphotheses are:

 $H_a : r_o$ Ttable

 $H_o: r_o$  $r_{table}$ 

1.  $H_a$  is acceptable if  $r_o$   $r_{table}$  or there is a significant correlation between the students' academic procrastination and their learning English Achievement

 $r_{table}$  or there is no significant correlation between 2.  $H_0$  is acceptable if  $r_0$ the students' academic procrastination and their learning English Achievement.

# **CHAPTER V**

# **CONCLUSION AND SUGGESTION**

# A. Conclusion

This research was done to find out the correlation between students' academic procrastination and their Achievement in learning English at the first grade students of Junior High School 40 Pekanbaru. So, the researcher can conclude this research as follows:

- 1. The students' academic procrastination at the first grade students of Junior High School 40 Pekanbaru is categorized into 'Less' level at score 65.95.
- 2. The students' Achievement in learning English at the first grade students of Junior High School 40 Pekanbaru is categorized into 'Good' level at score 79.03.
- 3. There is a significant negative correlation between students' academic procrastination and their Achievement in learning English at the first-grade students of Junior High School 40 Pekanbaru.

Based on the result of the research, the students' academic procrastination has negative correlation with their Achievement in learning English. It means the better academic procrastination they have, the lower Achievement in learning English they get.

# **B.** Suggestion

Considering the correlation between students' academic procrastination and their Achievement in learning English, the writer would like to give some suggestion as follows:

# 1. Suggestion for Teachers

- a. It is recommended to teacher to ask students to decrease their academic procrastination. Teachers should always give a positive perception to students about the importance of avoiding academic procrastination so that students can be more active in learning
- b. The teacher is expected to be a good role model for students as well as students' motivations and counselors in all problems and needs of students, so that students feel comfortable in learning. Also the teacher should be creative to improve the students' achievement in learning English by giving them more activities or exercise.

# 2. Suggestion for Students

a. The students should be able to decrease their academic procrastination in order to get better Achievement in learning English. They are expected to be able to motivate themselves and also try to increase awareness of the importance of obeying discipline especially related to academic assignments so that the main goals in learning and goals are easily achieved.

b. It is also hoped that students practice to manage their time as precisely as possible, because good time management can be an antidote to their dilatory behavior.

# 3. For Future Research

- a. The next researcher, should conduct research on a broader subject and use a variety of data collection instruments, such as conducting observations, interviews, etc. So that the data obtained can be more complete and can be developed more broadly especially to improve the results of further research.
- b. The result of this research are also expected to be used as a reference for who want to conduct a research.
