Measurement of Self Esteem: Comparison between the Constructs of West and Islam

The image shows a screenshot of a Gmail inbox on a desktop browser. The email is from 'amri darwis' (amridarwis3@gmail.com) dated 'Jum'at, 12 Agustus 2011 12.04'. The subject is 'IJHSS ID paper 0933 Review'. The email content is as follows:

Dear Author

We have reached a decision regarding your submission to *Internasional Journal of Humanities and Social Science (IJHSS)*, "Measurement of Self Esteem: Comparison between the Constructs of West and Islam".

Our decision is: Revisions Required

Reviewer A:

Abstract : Prepare your abstract in single paragraph and within 200 words (and min 150 words in length). You need to summarize your contribution, idea, findings/results, and describe implications of the findings. Without abbreviations, footnotes, or references. Without mathematical equations, diagram or tabular material. It is suggested to present your abstract included the elements: 1) state the primary objective of the paper; 2) highlight the merits (or contribution); 3) give a conceptual idea on the method; 4) describe the research design and procedures/processes employed (is it simulation, experimental, survey etc.); 5) give the main outcomes or results, and the conclusions that might be drawn; and 6) include any implications for further

Introduction section : xplain the context of the study and state the precise objective An Introduction should contain the following three parts: - Background: Authors have to make clear what the context is. Ideally, authors should give an idea of the state-of-the art of the field the report is about. - The Problem: If there was no problem, there would be no reason for writing a manuscript, and definitely no reason for reading it. So, please tell readers why they should proceed reading. Experience shows that for this part a few lines are often sufficient. - The Proposed Solution: Now and only now! - authors may outline the contribution of the manuscript. Here authors have to make sure readers point out what are the novel aspects of authors work. Authors should place the paper in proper context by citing relevant papers. At least, 8 references (recently journal articles) are cited to support this section

Results and Discussion : The presentation of results should be simple and straightforward in style. This section reports the most important findings, including results analyses as appropriate and comparisons to other research results. This section should be supported suitable references.

Conclusion : Your conclusion should make your readers glad they read your paper. Summarize sentences the primary outcomes of the study in a paragraph (NOT in numbering).

Recommendation: Revisions Required

Reviewer B:

Things that must be considered

1. Some terms in the form of abbreviations must be clarified, such as dare and others
2. Factor analysis must be given a separate explanation, because factor analysis is a separate theory. The general formula and the purpose of why factor analysis is used must be described in the research article (no need to be too complete)
3. The use of words must be re-examined, because there are still some words whose letters are incomplete as in the abstract words are still found that should be found and other words must be examined carefully
4. Why should factor analysis be performed? Is not enough with multiple regression analysis alone? Because the research title only uses regression analysis in selecting influential variables?

We hope that you can immediately reply to our email to improve your writing according to our Reviewer's comments.

best regards

Dr. Amri Darwis
