COMMENTS TO AUTHOR: (Please use additional sheet(s) if necessary)

Following improvements are required in final paper publication

1. Justify research contribution in the paper.
2. Hypothesize the problem clearly in the paper. And reflect on the same in conclusion in light of facts identified.
3. Discussion on limitations of the work is missing.
4. Difference of research contribution and achievement of objectives when compared to other such studies in light of results presented in literature is missing or is not clear in text.
5. Authors should consider the attributes for machine learning inputs, not the common one which usually leads to false conclusion, If the authors used these as attributes, I believe the research paper would be more attractive to follow.
6. In Section 3, it's better to compare the results between yours and the previous works.
7. There is a lack of discussion. Add some comments or further ideas based on the results shown in the charts and tables. For example, why some results get better and why others don't, etc.
8. The abstract is unstructured. Please briefly arrange your abstract as follow: general problems, specific problems, how to tackle the problems and results. Please write the results in quantitative, such as the

- percentage of the proposed algorithm accuracy (in abstract)
9. The paper is discussed more into the development side, however, it is not really clear the difference of this paper and those existing works mentioned in the Introduction section.
 10. Some English grammatical errors. Your sentence may be too long to be effective and may be to be hard follow. For clarity and conciseness, consider rewriting your sentence or splitting it into two or three sentences.
 11. The English in the present manuscript is not of publication quality and require major improvement. Please carefully proof-read spell check to eliminate grammatical errors.
 12. Other minor comments: please be very careful in selecting words, placing commas and full stops, etc. And therefore, it is highly suggested that the author should read the paper thoroughly. And if it is needed, please use a proofreader services.
 13. I think this paper is sufficient to be published. However, some parts, including analysis and superiority of the proposed method over the previous works, need to be enhanced carefully.
 14. There are minor errors only in writing, it is recommended to be accepted for publication
