2 April 2020 pukul 13.06

Dear Merry Siska,

Safety and Health at Work has moved to Editorial Manager (EM), Elsevier's online submission and peer review tracking system. Your EVISE account information and complete submission history are now available in EM.

Login instructions:

Your username is: merry.siska@uin-suska.ac.id

When you log into the system for the first time you will need to create a password here: <https://www.editorialmanager.com/e-shaw/l.asp?i=22873&l=3EZRVFJ7>

You can access the new EM site for Safety and Health at Work here:
<https://www.editorialmanager.com/e-shaw/>

Please make note of your username and password which you will need for future logins. You can update your details at any time via the "Update My Information" link on the menu.

Your EM credentials are not linked to your Elsevier Profile. The username/password associated with your Elsevier Profile remain unchanged.

Note: Please ensure to read and agree to the privacy policy of your account as soon as you login, so that, we can support you better during trouble shooting.

Kind regards,

Safety and Health at Work

More information and support

For guidance on login to Editorial Manager, https://service.elsevier.com/app/answers/detail/a_id/28452/c/10526/supporthub/publishing/kw/Editorial+manager/

For further assistance, please visit our customer service site: <https://service.elsevier.com/app/home/supporthub/publishing/>. Here you can search for solutions on a range of topics, find answers to frequently asked questions, and learn more about Editorial Manager via interactive tutorials. You can also talk 24/7 to our customer support team by phone and 24/7 by live chat and email.

For more information on using EM, please refer to Aries Systems' user Tutorials and Video Library:
<https://www.ariessys.com/for-current-customers/tutorials/>
<https://www.ariessys.com/views-and-press/resources/video-library/>

You can also access these videos by clicking the "Play" icon in the top right corner of the EM site.

In compliance with data protection regulations, you may request that we remove your personal registration details at any time. (Use the following URL: <https://www.editorialmanager.com/E-SHAW/login.asp?a=r>). Please contact the publication office if you have any questions.

Manuscript Number: E-SHAW-D-20-00074

A new holistic risk analysis approach based on quality function deployment

Dear Mrs Siska,

I would like to invite you to review the above referenced manuscript , as I believe it falls within your expertise and interest. The abstract for this manuscript is included below.

You should treat this invitation, the manuscript and your review as confidential. You must not share your review or information about the review process with anyone without the agreement of the editors and authors involved, even after publication. This also applies to other reviewers' "comments to author" which are shared with you on decision (and vice versa).

Please respond to this invitation at your earliest opportunity.

If you would like to review this paper, please click this link:
<https://www.editorialmanager.com/e-shaw/l.asp?i=34982&l=2REILC1U>

If you have a conflict of interest or do not wish to review this paper, please click this link:
<https://www.editorialmanager.com/e-shaw/l.asp?i=34983&l=K5UCLIEJ>

If you decline to review I would appreciate your suggestions for alternate reviewers.

If, for any reason, the above links do not work, please log in as a reviewer at <https://www.editorialmanager.com/e-shaw/>

Since timely reviews are of utmost importance to authors, I would appreciate receiving your review within 14 days of accepting this invitation. Once you submitted your review, you will receive a notification from Elsevier's reviewer recognition platform, which provides you with a link to your "My Elsevier Reviews" private profile page. You can collect your review certificates, editor recognition as well as discounts for Elsevier services from your profile page

I hope you will be able to review this manuscript.
Thank you in advance for your contribution and time.

Kind regards,

Dong-Han Ham

Associate Editor

Safety and Health at Work

Abstract:

Background: Risk is one of the most important issues that includes many components and its management is very important. Accordingly, all processes from the definition of the risk to the assessment, from the determination of preventive actions to the monitoring of the risk are included in the risk management. However, most of studies are only focused on risk assessment which is quite relationship with monitoring and mitigation.

Methods: A holistic risk management approach based on the house of quality approach is introduced and an 8-step creation process is defined. The proposed approach has been applied for a primary health care center and according to the results, the hazards, risks to be occurred by these hazards and preventive suggestions are presented.

Results: In the case study, 25 hazards have been identified, 11 risks identified regarding these hazards have been identified and ranked. According to the risk priority numbers, 5 preventive actions are suggested and evaluated in order to find the importance of them.

Conclusion: In this study, a new risk management approach in which all risk processes will be integrated has been proposed in an integrated manner. This study addresses the gap in the literature of holistic risk management according to integrate assessment, monitoring and mitigating processes.

A new holistic risk analysis approach based on quality function deployment

Dear Mrs Siska,

Thank you for agreeing to review the above referenced manuscript.

Timely reviews are of utmost importance to authors, therefore I would be grateful if you would please submit your review by Jun 06, 2020.

 Please read the following instructions carefully before starting your evaluation:

<https://www.elsevier.com/reviewers/how-to-conduct-a-review>

Please also note these important ethical guidelines all reviewers are asked to follow:

* You should treat the manuscript and your review as confidential. You must not share your review or information about the review process with anyone without the agreement of the editors and authors involved, even after publication. This also applies to other reviewers' "comments to author" which are shared with you on decision (and vice versa).

* If you suspect plagiarism, fraud or have other ethical concerns, please raise your suspicions with the editor, providing as much detail as possible.

* Any suggestion you make that the author include citations to your (or your associates') work must be for genuine scientific reasons and not with the intention of increasing your citation counts or enhancing the visibility of your work (or those of your associates).

To view the manuscript, please click here: <https://www.editorialmanager.com/e-shaw/l.asp?i=35006&l=18G0LEJD>.

When you are ready to submit your review, you may access the submission record here <https://www.editorialmanager.com/e-shaw/l.asp?i=35007&l=4Y3WKNKUP>. Please click on the "Submit Recommendation" link to enter your comments.

If, for any reason, the above link does not work, please log in as a reviewer at <https://www.editorialmanager.com/e-shaw/>.

I look forward to receiving your review soon.

Thank you in advance for your contribution and time.

Kind Regards,

Dong-Han Ham
Associate Editor

Manuscript Number: E-SHAW-D-20-00074
A new holistic risk analysis approach based on quality function deployment

Dear Mrs Siska,

Thank you for reviewing the above referenced manuscript. With your help, I have reached a reject decision on this manuscript.

The anonymised comments to author, from all reviewers, are included below. You can also access this information by logging into Editorial Manager as a reviewer.

Thank you for your contribution and time in reviewing this manuscript, which not only assisted me in reaching my decision, but also enables the author(s) to disseminate their work at the highest possible quality.

I am grateful to you for your assistance as a reviewer for Safety and Health at Work.

Kind regards,

Dong-Han Ham
Associate Editor
Safety and Health at Work

Comments to author:

Reviewer #1: 1. Add limitations of conventional risk analysis method

2. There is no significant novelty in the manuscript, if we compare to other publication. Why this new approach only modify QFD approach?
Example: "Holistic approach for diagnosing, prioritising, implementing and monitoring effective strategies through synergetic fusion of SWOT, Balanced Scorecard and QFD"

L.C. Koo , Hannah Koo, <https://doi.org/10.1504/WREMSD.2007.012131>

3. Explain the difference of an 8-step creation to other conventional method

4. Explain the relationship of Figure 1 to the new method in manuscript

5. Can this method (HRAM approach) use in other cases? Please explain about that.

6. What is the differences of basic HOQ structure to graphical representation of HRAM?

7. Explain the significant relationship between facility layout improvement to the proposed approach.

8. In Figure 4, there is no deep explanation about:

- Regulation compliance
- Improving relationship with partners
- etc

Reviewer #2: I was interested to read and review this article for its research on risk analysis at a health care centre. Health care centres are full of risks of various nature. These are not thoroughly explored in the article. The methodology is too complex and not reader friendly. However the article is filled with technical jargons with little or no practical implications for an Occupational Health Practitioner. The article will fit well in a Health care management Management/Safety Engineering journal and not the SHAW

Safety and Health at Work

Comments to author:

Reviewer #1:

Introduction: using old references

Methodology: Explain the new methodology accurately, add some figures to make this research important

Results: Add a concrete recommendation for this research, not just a description about increase/decrease behaviors of employee

References: change with new references

Reviewer #2: On page 4, the words "develpoping" and "analyses" are misspelled on lines 19 and 39.

Despite the great effort that has been put into 18 months, unfortunately, there is no particular innovation in this manuscript. As training increases, consequently, unsafe behavior will decrease, which is to be expected.

You can collect your review certificates, editor recognition as well as discounts for Elsevier services from your profile page

I hope you will be able to review this manuscript.
Thank you in advance for your contribution and time.

As a reviewer you are entitled to complimentary access to references, abstracts, and full-text articles on ScienceDirect and Scopus for 30 days. Full details on how to claim your access via Reviewer Hub (reviewerhub.elsevier.com) will be provided upon your acceptance of this invitation to review.

Please visit the Elsevier Reviewer Hub (reviewerhub.elsevier.com) to manage all your refereeing activities for this and other Elsevier journals on Editorial Manager.

Kind regards,

Sei-Jin Chang

Associate Editor

Safety and Health at Work

Abstract:

Background: Job related crucial decision-making directly impact human functional capacity. Chronic disease conceptualization is imperative in the context of occupational stress exposure. **Methods:** Fifty six workers of air defense command force were analyzed in two scenarios: having job responsibility that engage people in weapon assignment related 'crucial' decisions while the other condition involve professional decisions not related to weapon assignment referred to as 'non-crucial'. Health outcomes including cardiovascular disease history (CVD), hypertension and diabetes variability were measured during work hours. Evaluation of job stress was performed using self-structured questionnaire. **Results :** Poor functional capacity of air defense commanders was attributed by duration of present job (>25 years) (odds ratio = 4.5; 95% CI = 1.45–13.8), CVD (odds ratio = 3.4; 95% CI = 1.05–11.1) and resulting hypertension (odds ratio = 3.2; 95% CI = 1.08–9.77). A significant association between body mass index and poor functional capacity ($r = 0.31$; $p < 0.05$) indicated prevailing hypertensive conditions. Further confirmation was obtained by two-way ANOVA findings where hypertension and job association for more than 25 years had significant impact on poor functional capacity ($F(1, 52) = 14.88$, $p < 0.001$, $\eta^2 = 0.22$) of air defense commanders whose job task involved weapon assignment related decision making. **Conclusion:** Experienced air defense commanders with prolonged assignment of crucial decision-making had developed substantial mental stress that severely hampered their ability to perform daily life activities especially

at home. Less stressful tasks could prove effective intervention strategy to improve health of air defense commanders.

ELSEVIER

Thank you for being a reviewer

Dear Merry Siska,

Peer review – and reviewers – are at the heart of the academic publishing process. The exceptional challenges we have all faced during the last two years have reconfirmed the critical importance of peer review. We would like to express our deepest gratitude for volunteering your time and expertise as a reviewer.

Open access

Letter from the Elsevier Journals Leadership Team

“Peer review is critical to improving the quality of published global research. Yet it is often an unseen and thankless task. The global COVID pandemic has made it increasingly more difficult to juggle professional and personal commitments. Providing a voluntary service, such as peer review, under challenging circumstances is truly a dedication to your community and the advancement of research in your field.

It is an honour for me to acknowledge your commitment by saying ‘thank you’. On behalf of all our journal editorial teams, we are indebted to the time you voluntarily dedicate to supporting our journal(s). Over the course of 2022, we will continue to improve the peer review process for you and your fellow reviewers by making sure we offer optimal support through our systems and staff, and further improve the relevancy of the papers you are asked to review.

Thank you for volunteering your valuable time to peer review.”

Laura Hassink
Managing Director Elsevier Journals

We thank you for your ongoing support and wish you and your loved ones all the best for the year ahead.

With best wishes,

Elsevier Reviewer Experience Team

We encourage you to visit our [Elsevier Reviewer Hub](#):

- View and handle your pending invitations and reviews across all Elsevier journals
- Download certificates recognizing your reviewing efforts
- Claim your complimentary 30 days' access to Scopus and ScienceDirect for each accepted review invitation
- Volunteer to review for journals of your choice
- **NEW:** Download your Elsevier reviewer activity report for a period of your choice

Safety and Health at Work

Abstract:

Background: Based on the person-environment fit theory, the relationship between leader-follower psychological capital (PC) congruence and safety behavior (SB) and the mediating role of intrinsic safety motivation (ISM) were explored.

Methods: The study collected 242 paired questionnaires from frontline construction workers and team leaders in China, and used polynomial regression and response surface analysis to conduct an empirical study.

Results: The results showed that (a) the higher the leader-follower PC congruence, the higher the follower SB; (b) when leader-follower PC was congruent, the effect of both high PC on follower SB was stronger compared to both low PC; (c) when leader-follower PC was incongruent, the effect of follower PC (FPC) above leader PC (LPC) was stronger on follower SB compared to FPC below LPC; (d) ISM mediated the relationship between leader-follower PC congruence and follower SB.

Conclusion: The degree of leader-follower PC congruence determines the level of follower SB. In the process of leader-follower fit, FPC plays a decisive role in influencing SB, while LPC is more of a supporting role. Leader-follower PC congruence indirectly influences SB through ISM.

Safety and Health at Work

Abstract:

Background: Role stress and unsafe behaviors have received considerable research attention over the years. Most of these studies have been conducted in construction industry, with little attention paid to take-out industry. Nonetheless, some studies have demonstrated role stress exists in take-out riders' work. Therefore, this study aimed to examine how role stress affects take-out riders' unsafe behaviors, and consider factor of smartphone interaction frequency. This study was necessary considering unsafe behaviors of take-out riders have important implications for their personal safety and continued health in take-out industry.

Methods: This study used a questionnaire and experimental research. The questionnaire spanned four weeks to obtain data from 326 front-line take-out riders, after which data were analyzed. In the experimental research, 12 participants were invited to simulate take-out riders' common smartphone interactions during their delivery process to further explore the effects of smartphone interactions on them.

Results: The questionnaire research revealed role stress, smartphone interaction frequency, and unsafe behaviors were positively correlated. The experimental research found smartphone interactions during a rider's motion would increase motion's difficulty and time, and increase their comprehensive pressure, but this increase did not prevent them from completing motions.

Conclusion: When take-out riders are under great role stress, they usually have unsafe behaviors, and will voluntarily increase the use of smartphone, which can make them more prone to accidental conditions; hence, they are more likely to exhibit unsafe behaviors during the

delivery process. This study's results can be used as a reference for other similar instant delivery industries.

Thank you for volunteering to review in 2022

Dear Merry Siska,

Reviewers and peer review are absolutely vital to the academic publishing process and we'd like to express our deepest gratitude to you for volunteering your time and expertise as a reviewer. Your ongoing support means a great deal to us and we couldn't continue to support the advancement of science without you.

Letter from the Elsevier Journals Leadership Team

“Peer review, while often an unseen and undervalued task, is essential to improving the quality of published global research. On behalf of all our journal editorial teams – it is an honour for me to say ‘thank you.’ We are sincerely grateful for the time you volunteer to support our journals. It is a testament to your commitment to your community and the advancement of the research in your field.

In the year ahead, we will continue to improve the peer review process through optimal support and improved relevancy of the papers you are invited to review.

Thank you again for volunteering your valuable time to peer review.

”

Laura Hassink
Managing Director Elsevier Journals

Once again, a heartfelt thank you for your ongoing support, and we wish you all the very best for 2023 and beyond.

Check out Elsevier's Reviewer Hub where you can manage your review activity, claim your rewards, and download your reviewer activity reports and recognised reviewer certificates.
