----- Overall evaluation -----

this work is very good and detail. the result is good and acceptable.

this works is a combination between GA and FL, if possible for the future work, it would be good if the FL part is also compared with any other learning machine, such as ANN, SVM and etc., there some concern:

1. research methodology would be more easy to understand if it perform in block diagram.

2. if possible could the author make the block diagram on how the system develop, from get the input data, GA process, and how the fuzzy logic develop until get the optimal result of the testing phase.
